

# Tyler Mini Gyro

The Tyler Minigyro camera mount is one of the first stabilising mounts able to go from one shooting platform, (say helicopter) to another (say car or motorcycle) in one easy set up. This mount has great versatility and its compact size makes it the perfect choice for working in tight spaces.

It works in virtually any aircraft, is easy to transport and no CASA or other aviation authority approval is required.

It's ideal for budget conscious-projects or for projects in remote areas where shipment of heavy systems is impractical or engineers are unavailable for sign off.

## **Technical Summary:**

**Focal range:** Wide – Medium

**Point-of-view:** Side

**Maximum Camera weight:** 18kg

**Movement:** Pan left or right, some tilt

**Install time:** 30 minutes
